RE: Letter of Recommendation for Murow|CM

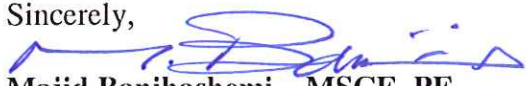

To Whom It May Concern,

This letter is to provide my recommendation of **Murow|CM** for complete Construction Management services. My recommendation is based on a project that **Murow|CM** completed for us in the County of Orange in which I was the Resident Engineer for Caltrans. The project was the northbound I-5 Camino Capistrano at La Novia Ave. interchange improvement located in the City of San Juan Capistrano. The project consisted of the removal of the existing freeway on & off ramps and adjacent intersection while maintaining traffic flow, the re-alignment of La Novia Ave., underground utility improvements, and the installation of a 114' diameter roundabout intersection. The project was initiated by Caltrans in response to the anticipated heightened traffic flow due to the local Taylor Morrison housing development.

This project contained strict specifications from the City of San Juan Capistrano and Caltrans that made the project complex in both scheduling and quality of work. The team from **Murow|CM** was always professional and conducted business in a way that was always in the best interest of both San Juan Capistrano and Caltrans, while creating an excellent relationship with the contractor.

Murow|CM had an extensive knowledge of this type of street improvement which allowed the team to work in an efficient manner to deliver a superior product. **Murow|CM** displayed a great attention to detail, making sure the material delivered to the site was accurate and the quality of construction and other services were being achieved at a "high" level. **Murow|CM** displayed the same attention to detail in the review of various CM documentation such as; pay applications, change order requests, verification for quantities and labor compliance documentation. The worksite always followed Caltrans guidelines and specifications and created a safe jobsite environment. I was continually impressed with the extensive relationships that **Murow|CM** was able to build with Caltrans, and the entire project team. Their staff was always available and could be reached whenever San Juan Capistrano or Caltrans needed to call upon them. I would highly recommend **Murow|CM** for any type of project and look forward to working with them in the near future. I can be reached at (657) 328-6557.

Sincerely,

Majid Banihashemi MSCE, PE
Resident Engineer / Permit Engineer
